

In a class of its own: Roger™ SoundField

Because teachers need a little help too

roger

Teachers make great demands on their voices; they talk all day long in the classroom and have to project loud enough so that all their students can hear them clearly. Unfortunately, this stress on the voice can lead to vocal strain and fatigue.* A survey in the UK by the Royal National Institute for Deaf People revealed that **59% of schools reported teaching days being lost due to vocal strain.*** The cost of finding replacement teachers as a result is significant.

The solution? Soundfield technology. Amplifying a teacher's voice so that it reaches the entire classroom means that students don't miss a word, and teachers can do their job without the added stress of shouting to be heard.

Why Roger SoundField by Phonak?

1. Better vocal health

Being able to teach without vocal strain means less chance of dry throat symptoms, fatigue while talking, vocal effort and loss of voice.* The risk of long-term vocal health problems is also reduced.*

2. Improved class management

When students respond to instructions the first time around, in-class discipline is easier to maintain.* Plus, less repetition by the teacher means more time to get through the work that needs to be covered.

3. Superior performance

Being able to hear and respond to instructions better has been shown to improve student performance.* Schools perform better financially too, thanks to reduced teacher absenteeism due to loss of voice and the associated replacement teacher costs.*

With the best ever speech-in-noise performance, Roger SoundField is a class above the rest.* Fully automated settings make it easy to use — Just plug it in, turn on and teach.
